Results 1 - 11 of 11 short listing

- 1** Session 2: secure Web services: Designing a distributed access control processor for network services on the Web 83%

Reiner Kraft

Proceedings of the 2002 ACM workshop on XML security November 2002

The service oriented architecture (SOA) is gaining more momentum with the advent of network services on the Web. A programmable and machine accessible Web is the vision of many, and might represent a step towards the semantic Web. However, security is a crucial requirement for the serious usage and adoption of the Web services technology. This paper enumerates design goals for an access control model for Web services. It then introduces an abstract general model for Web services components, along ...

- 2** The Web Service Discovery Architecture 80%

Wolfgang Hoschek
Proceedings of the 2002 ACM/IEEE conference on Supercomputing November 2002

In this paper, we propose the Web Service Discovery Architecture (WSDA). At runtime, Grid applications can use this architecture to discover and adapt to remote services. WSDA promotes an interoperable web service discovery layer by defining appropriate services, interfaces, operations and protocol bindings, based on industry standards. It is unified because it subsumes an array of disparate concepts, interfaces and protocols under a single semi-transparent umbrella. It is modular because it def ...

- 3** Scalable directory services using proactivity 77%
Fabián E. Bustamante , Patrick Widener , Karsten Schwan
Proceedings of the 2002 ACM/IEEE conference on Supercomputing
November 2002
Common to computational grids and pervasive computing is the need for an expressive, efficient, and scalable directory service that provides information about objects in the environment. We argue that a directory interface that 'pushes' information to clients about changes to objects can significantly improve scalability. This paper describes the design, implementation, and evaluation of the Proactive Directory Service (PDS). PDS' interface supports a customizable 'proactive' mode through which ...
- 4** Access control with IBM Tivoli access manager 77%
Günter Karjoth
ACM Transactions on Information and System Security (TISSEC) May 2003
Volume 6 Issue 2
Web presence has become a key consideration for the majority of companies and other organizations. Besides being an essential information delivery tool, the Web is increasingly being regarded as an extension of the organization itself, directly integrated with its operating processes. As this transformation takes place, security grows in importance. IBM Tivoli Access Manager offers a shared infrastructure for authentication and access management, technologies that have begun to emerge in the com ...
- 5** Technical columns: Distributed computing research issues in grid computing 77%
Henri Casanova
ACM SIGACT News September 2002
Volume 33 Issue 3
Ensembles of distributed, heterogeneous resources, or *Computational Grids*, have emerged as popular platforms for deploying large-scale and resource-intensive applications. Large collaborative efforts are currently underway to provide the necessary software infrastructure. *Grid computing* raises challenging issues in many areas of computer science, and especially in the area of *distributed computing*, as Computational Grids cover increasingly large networks and span many organi ...
- 6** Papers: Open signaling for ATM, internet and mobile networks 77%
(OPENSIG'98)
Andrew T. Campbell , Irene Katzela , Kazuho Miki , John Vicente

ACM SIGCOMM Computer Communication Review January 1999
Volume 29 Issue 1

The ability to rapidly create and deploy new transport, control and management architectures in response to new service demands is a key factor driving the programmable networking community. Competition between service providers may hinge on the speed at which one provider can respond to new market demands over another. The notion of open programmable networks is having broad impact on service providers and vendors across a range of telecommunication sectors calling for major advances in open ne ...

- 7** A mobile agent infrastructure for the mobility support

 Paolo Bellavista , Antonio Corradi , Cesare Stefanelli

Proceedings of the 2000 ACM symposium on Applied computing March 2000

77%
- 8** What is scalability in multi-agent systems?

 Omer F. Rana , Kate Stout

Proceedings of the fourth international conference on Autonomous agents June 2000

77%
- 9** DeepView: a channel for distributed microscopy and informatics

 B. Parvin , J. Taylor , G. Cong , M. A. OKeefe , M. H. Barcellos-Hoff

Proceedings of the 1999 ACM/IEEE conference on Supercomputing (CDROM) January 1999

77%
- 10** Open Signaling for ATM, INTERNET and Mobile Networks

 (OPENSIG'98)

Andrew T. Campbell , Irene Katzela , Kazuho Miki , John Vicente

ACM SIGOPS Operating Systems Review April 1999

Volume 33 Issue 2

The ability to rapidly create and deploy new transport, control and management architectures in response to new service demands is a key factor driving the programmable networking community. Competition between service providers may hinge on the speed at which one provider can respond to new market demands over another. The notion of open programmable networks is having broad impact on service providers and vendors across a range of telecommunication sectors calling for major advances in open ne ...

- 11** Object lessons learned from a distributed system for remote

 building monitoring and operation

Frank Olken , Hans-Arno Jacobsen , Chuck McParland , Mary Ann Piette , Mary F. Anderson

77%

ACM SIGPLAN Notices , Proceedings of the conference on
Object-oriented programming, systems, languages, and applications
October 1998
Volume 33 Issue 10

In this paper we describe our experiences with the design, the deployment, and the initial operation of a distributed system for the remote monitoring and operation of multiple heterogeneous commercial buildings across the Internet from a single control center. Such systems can significantly reduce building energy usage. Our system is distinguished by its ability to interface to multiple heterogeneous legacy building Energy Management Control Systems (EMCSs), its use of the Common Object Request ...
